AI Ethics & Responsible Usage Declaration

I hereby declare that:

• The dataset used in this assignment is properly cited and ethically sourced.

• I have analyzed potential biases present in the dataset and model.

• I have considered privacy implications related to the data used.

• I understand the responsible and ethical usage of the developed system/model.

• This work adheres to institutional guidelines on ethical AI practices.

Dataset Details:

Source: Manually collected and labeled tweet dataset

Type of Data: Text data (tweets for sentiment classification)

Contains Personal/Sensitive Data? (Yes/No): No (public-style/sample tweets used)

If Yes, describe anonymization steps: Any identifiable information (if present) has been avoided or

generalized

Identified Bias (if any):

The dataset contains only 100 tweets, which is relatively small and may introduce:

Sampling bias

Limited representation of diverse opinions

Manual labeling may introduce human bias in sentiment classification.

The model may misinterpret:

• Sarcasm

• Slang

• Context-dependent meanings

Efforts have been made to ensure balanced labeling, but some bias may still exist.

Responsible Usage Statement:

• 🕐 This sentiment analysis model is developed only for learning and academic emonstration.

• 🕐 The predictions may not be fully accurate due to:

• Small dataset size

• Simplicity of models (Naive Bayes, Logistic Regression, SVM)

• 🕐 The model should not be used for real-world decision-making, such as:

• Political analysis

• Business sentiment evaluation

• Social profiling

• 🕐 Users must understand the limitations of NLP models in interpreting human language.

Student Details:

Name: Bhandare Atharv Arvind

Roll No: 12

UIN: 231A039

Course: TE-AIDS

Date: 27/04/2026
